PROFESSIONAL SUMMARY

Civil Engineer in Computer Science from Universidad Austral de Chile and Software Engineer with experience in full-stack development, building digital products, and systems integration. I've worked with TypeScript, Next.js, NestJS, React, Python, and PostgreSQL on projects that include high-volume processing of millions of records in about two hours, integrations with Chile's tax authority (SII), and end-to-end development of a platform from requirements through client demo.

I was previously part of NotCo's AI Team, working on AI-driven products for the food industry. I currently also take on independent projects for clients, and use tools like Claude Code and Cursor as a regular part of my development workflow.

I'm looking to keep growing in Software Engineering, Full Stack, and Product Engineering roles with a focus on automation and applied AI, always aiming to build solutions that are useful, maintainable, and aligned with real business needs.

EXPERIENCE

SOFTWARE ENGINEER | SEICHO | MARCH 2026 - SEPTEMBER 2026

- Develop and evolve full-stack solutions with Next.js, NestJS, and TypeScript across multiple products and business domains, working on both new development and existing systems.
- Onboard into existing codebases to analyze legacy systems, troubleshoot issues, refactor components, and implement new features across frontend, backend, and business logic.
- Developed a raffle platform almost end-to-end, implementing frontend and backend functionality from requirements through client demo, while gaining hands-on exposure to deployment workflows with Fly.io.
- Contributed to a proof of concept for high-volume professional fee receipt generation and processing, working with millions of records processed in approximately two hours and addressing large-scale performance challenges.
- Develop and maintain integrations and automation for tax-related workflows, including data extraction from Chile's tax authority (SII) systems, document processing, invoicing, and expense-reporting flows.
- Work directly with clients through requirements gathering, product demos, feature validation, and refinement, contributing to technical decisions and product evolution based on feedback.

INDEPENDENT EXPERIENCE

E-COMMERCE DEVELOPMENT | LIVELLO SPA | AUGUST 2026 - PRESENT

- Designed and built a Shopify e-commerce store for a sports supplement brand.
- Customized site structure, product catalog, purchase experience, and content.
- Worked directly with the client to translate business needs into product and web experience decisions.

EXPERIENCE

SOFTWARE ENGINEER - AI TEAM (TRAINEE) | NOTCO | AUGUST 2025 - MARCH 2026

- Develop and maintain frontend and backend features using Vue.js, Nuxt, and FastAPI.
- Contribute to the development and evolution of AI-based products for the food industry.
- Automate and improve continuous integration and deployment processes using GitHub Actions and Docker environments.
- Participate in architecture decisions, code review, and technical documentation.
- Collaborative work within the Tech team in a multidisciplinary environment.

SOFTWARE DEVELOPMENT | THESIS PROJECT | SEPTEMBER 2024 – FEBRUARY 2025

- Designed and implemented a full-stack architecture using React, Node.js, and Docker.
- Built a Progressive Web App (PWA) focused on scalability and user experience.

PROFESSIONAL INTERNSHIP | GRUPO SAESA | JANUARY 2024 – MARCH 2024

- Took part in a multidisciplinary Innovation and Development team, collaborating with professionals from different areas.
- Automated engineering processes within the Engineering sub-department using Excel and VBA, reducing turnaround time and errors in repetitive tasks.

ENTRY-LEVEL INTERNSHIP | SOPHIA TECHNOLOGIES | MARCH 2023 – JULY 2023

- Developed Python scripts to generate PDF reports with dynamic tables for the GORE de Los Lagos (Los Lagos regional government).

SKILLS AND TECHNOLOGIES

Programming Languages: TypeScript, JavaScript, Python, SQL, VBA

Frameworks: Next.js, NestJS, React, Node.js, FastAPI, Vue.js, Nuxt

Databases: PostgreSQL, MongoDB

DevOps / Tools: Docker, GitHub Actions, Fly.io, Git, GitHub

AI-assisted development: Claude, Claude Code, Cursor.

LANGUAGES

English: Advanced – C1 (*EF SET Certificate*) [View Certificate.](#)

EDUCATION

CIVIL ENGINEERING IN COMPUTER SCIENCE | 2017 - 2025

Universidad Austral de Chile, Valdivia, Chile
